

Arshdeep Singh

Machine Learning Student

badhanarsh2008@gmail.com | 6284066113 | Hoshiarpur, Punjab | GitHub: github.com/badhanarsh2008-cmyk

SUMMARY

B.Tech (AI & ML) student at SBBSU Jalandhar with hands-on experience in PyTorch, neural networks, and Transformer/LLM architectures, gained through self-study and a Machine Learning internship. Comfortable across the full stack — able to train an ML model and deploy it behind a working UI. Built an AI-driven resume-readiness scoring tool and a real-time chat application using Flask and Socket.IO, and is currently building a lightweight LLM to power it.

TECHNICAL SKILLS

- Machine Learning / Deep Learning: PyTorch, Neural Networks, Transformers, Large Language Models (LLMs), Model Training & Fine-Tuning, Model Deployment
- Full Stack Development: Frontend UI development for ML model deployment, REST API integration, Web Application Development
- Programming Languages: Python, JavaScript, HTML, CSS
- Frameworks & Libraries: Flask, Socket.IO, PyTorch
- Databases: SQL, MongoDB, SQLite3
- Tools & Platforms: Git, GitHub, JSON
- Core Competencies: Communication Skills, Problem Solving, Team Collaboration

EXPERIENCE

Machine Learning Intern *June 2026 – July 2026*

S O Infotech Pvt Ltd

- Collaborated with the engineering team during a one-month, hands-on machine learning internship, strengthening professional communication and cross-team coordination skills.
- Implemented and trained neural network models in PyTorch, applying core deep learning concepts to real training/evaluation workflows.
- Analyzed Transformer architecture and Large Language Model (LLM) internals — including attention mechanisms, tokenization, and training/inference pipelines — to build applied ML intuition.

PROJECTS

AI Resume Analyzer *Personal Project | Python, Flask*

- Engineered a full-stack Flask web application that parses uploaded resumes and generates an ATS-readiness score on a 1–10 scale, evaluating resume quality features rather than replicating any specific company's ATS.
- Automated a multi-factor scoring pipeline evaluating keyword/skill matching, contact and section completeness, action-verb usage, measurable achievements, bullet formatting, and readability.
- Designed and trained a lightweight neural network to combine the individual rule-based checks into a single weighted resume-readiness score, replacing simple averaging with a learned weighting.

Real-Time Chat Application *Personal Project | Python, Flask, Socket.IO*

- Architected a real-time chat application using Flask and Socket.IO to enable bidirectional, event-driven communication between client and server.
- Implemented the front end with HTML, CSS, and JavaScript, and structured all message payloads in JSON for reliable client-server data exchange.
- Integrated a pre-trained LLM to analyze conversation history and generate context-aware AI responses on user request, enhancing interaction and productivity.

FolioNet — Project Showcase Platform — *In Progress | Concept & Build*

- Architecting a platform where users can publish finished projects with screenshots, a problem-solution summary, and a how-to-use guide, so others can browse a public feed and discover ready-to-use tools.

- Scoping the platform to solve project discoverability for solo/small-team builders (e.g., surfacing this chat app), giving independently-built tools an organic path to visibility and scale.

EDUCATION

Bachelor of Technology (B.Tech) — Artificial Intelligence & Machine Learning | *Expected 2028*

Sant Baba Bhag Singh University (SBBSU), Jalandhar | Currently in 2nd Year, 4th Semester

- Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Computer Networks, Machine Learning, Deep Learning, Computer Vision
- CGPA: 7.6/10
